

FortX Product Architecture

Current foundation, planned financial domain, FortVault boundary, exchange providers, and Chainalysis KYT

Client Current platform Owned state External provider Planned component / connection

FortX Connection and Status Register

Current foundation and provider capabilities are separated from planned product integrations

Source	Destination	Interface	Purpose	Status
FortX Mobile/Web	Keycloak	OIDC/OAuth over TLS	Authentication and token issuance	Current
FortX Mobile/Web	FortX Backend	Authenticated HTTPS API	End-user product operations	Current foundation
FortX Mobile	Sumsub MobileSDK	Provider SDK	User KYC interaction	Current
FortX Backend	Sumsub	Authenticated HTTPS API	SDK token issuance and KYC status	Current
Sumsub	FortX Backend	HMAC-verified webhook	Normalized KYC status changes	Current
FortX Backend	FortX PostgreSQL	PostgreSQL	Identity/KYC and future financial state	Current foundation
FortX Backend	FortX Redis	Redis	Cache, rate limiting and async infrastructure	Current foundation
FortX Backend	Financial domain	Internal services	Ledger, quotes, swaps, deposits and withdrawals	Planned
FortX financial domain	FortVault	Versioned authenticated API	Custody operations and KYT screening requests	Planned
FortVault	FortX Backend	Validated callback/event/API result	Custody results and normalized KYT decisions	Planned
FortVault	Chainalysis KYT	Authenticated provider API	Address/transaction screening and case queries	Planned
Chainalysis KYT	FortVault	Verified callback/polling	Risk, alert, case and status updates	Planned
FortVault	Blockchain networks	Chain RPC/provider APIs	Custody broadcast, confirmations and chain data	Current FortVault
FortVault	Binance	Authenticated exchange API	Key setup, test, balance, permission, deposit sync	Current limited
FortVault	Gate.io	Authenticated exchange API	Credential test, balance, permission, deposit sync	Current limited
FortVault	MEXC	Authenticated exchange API	Credential test, balance, permission, deposit sync	Current limited

Exchange scope limitation

Binance, Gate.io, and MEXC adapters currently support key setup and account synchronization operations. The diagram does not claim exchange trading or withdrawals.

Chainalysis KYT target integration

No Chainalysis integration was found in the reviewed source. FortVault will own the provider integration; FortX will submit KYT requests and receive normalized results only through FortVault.
