

# README and Architecture Index

| Document field | Value                           |
|----------------|---------------------------------|
| Document owner | FortVault                       |
| Classification | Confidential                    |
| Status         | Proposed controlled sharing set |
| Date           | August 28, 2026                 |

The following documents are suitable starting examples for the ISO implementation partner. Share them through the approved controlled channel or provide a reviewed export. Do not provide repository-wide access by default.

| Document                                           | Purpose                                                                            | Sharing notes                                                                                             |
|----------------------------------------------------|------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| fortvault-backend/README.md                        | Backend setup and development overview                                             | Review for environment-specific values before sharing.                                                    |
| fortvault-processing/README.md                     | Custody Processing setup and execution overview                                    | Review for environment-specific values before sharing.                                                    |
| fortvault-mpc/README.md                            | MPC component overview and development setup                                       | Do not share node configuration, generated <code>node.env</code> files, keys, or recovery material.       |
| fortvault-health-audit/README.md                   | Read-only health-audit procedure                                                   | Share only example/sanitized manifests; never include the audit key.                                      |
| iso-27001/FORTVAULT_CUSTODY_TECHNICAL_OVERVIEW.md  | Custody architecture, data flows, trust boundaries, and ISO control considerations | Current implementation overview; not evidence of operational control effectiveness.                       |
| iso-27001/FORTVAULT_EXCHANGE_TECHNICAL_OVERVIEW.md | Read-only exchange-integration architecture and scope                              | Confirm the recipient understands that trading and withdrawals are outside the current implemented scope. |
| iso-27001/FORTVAULT_COMPONENT_ARCHITECTURE.md      | FortVault component, connection, and ownership architecture                        | Distinguishes durable state, transport, external providers, and MPC trust boundaries.                     |
| iso-27001/FORTX_COMPONENT_ARCHITECTURE.md          | FortX product architecture and FortVault integration boundary                      | Distinguishes current foundation from planned financial-domain and KYT integrations.                      |
| iso-27001/FORTX_FORTVAULT_PLATFORM_ARCHITECTURE.md | Combined FortX and FortVault component architecture                                | Distinguishes current components from planned financial-domain integration.                               |
| architecture/offline-mpc.md                        | Development-prototype offline MPC architecture                                     | Share only when relevant; explicitly retain its prototype and non-production status.                      |

## Pre-Sharing Review

Before sending any README or architecture document externally:

- 1 Review for credentials, tokens, private URLs, customer names, addresses, or internal operational identifiers.
- 2 Confirm the document describes the intended environment and has not been superseded.
- 3 Share the smallest relevant set rather than a full repository export.
- 4 Record what was shared, with whom, and on what date in the evidence register.
